Scope of Information and Communication Technologies

use of ICT in education, business, governance, healthcare

ICT in education

- **Blogs and social networks**: it gives us the possibility of creating work groups where students expose or discuss different topics, publish content related to the subjects, etc.
- **Planning through tools**: calendars and task managers are very useful to schedule exams, deliveries, create workflows, etc.

ICT in education

most used technologies in the classroom:

- **Data storage in the cloud**: it allows us the possibility of working collaboratively, accessing from any device and from any place. Some of the tools that use this technology are office packages, storage, etc.
- **Digital whiteboards and interactive tables**: whiteboards allow projecting and controlling images from a computer, making notes and comments, and saving and / or sending the screen by email. The interactive tables give the possibility for the students to interact directly with the surface.

Benefits of using ICT in education

- **Better Conceptual Understanding:**

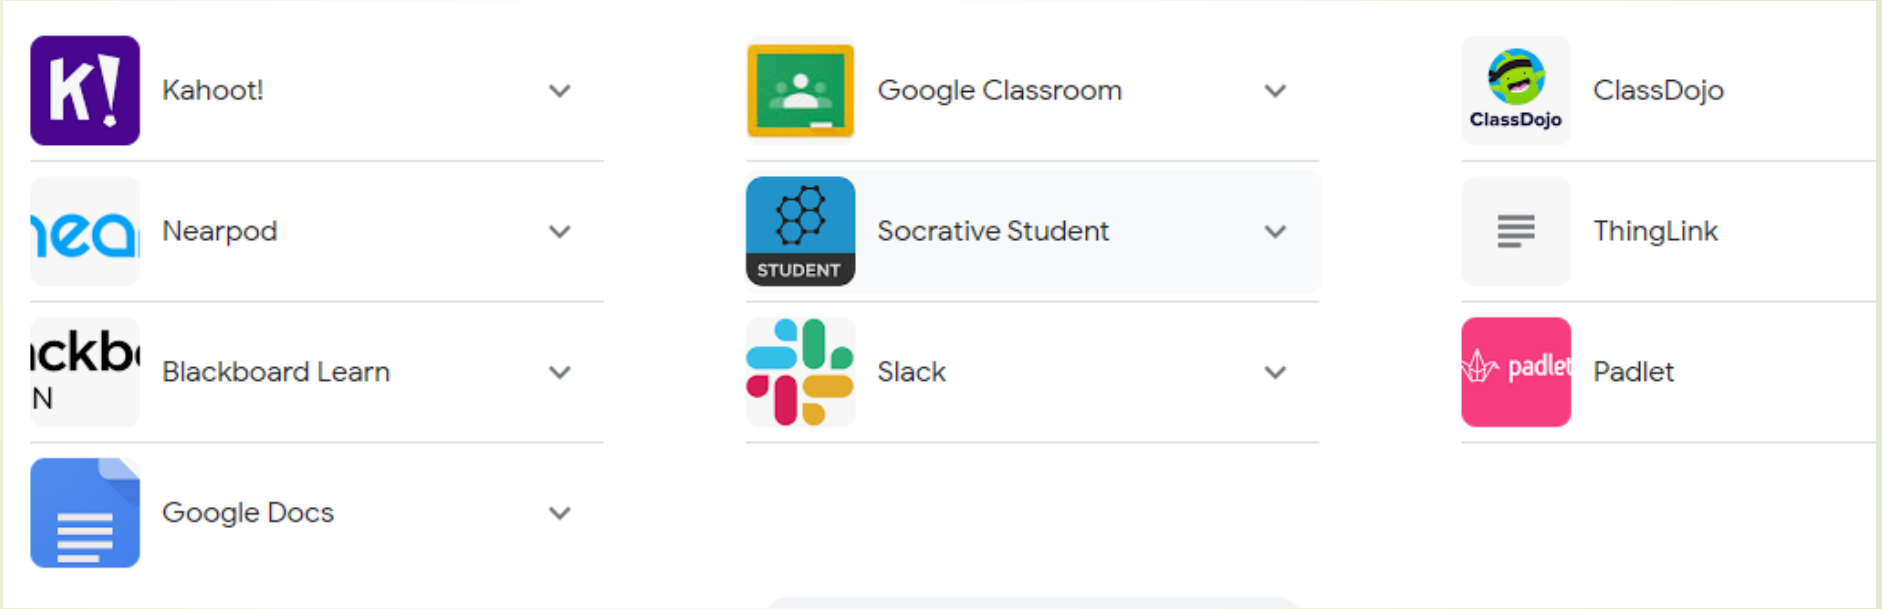

When students learn different concepts through animated videos or other technologically enhanced digital mediums, they will have a better conceptual understanding.

- **Ensure Active Participation:**

For the learning process to be effective, it has to be a two-way process. ICT makes this possible.

Teachmint provides you with the best LMS that offers different tools like Live Polls, Hand Raise, Private & Classroom chat, etc to ensure the active participation of your students.

Application of ICT in education

ICT use in business

- **Intranet**: A network used by employees of a business to communicate privately is called an intranet. This may include training videos, employee information, or plans of the company.
- **Extranet**: Also a private network. Along with employees, other stakeholders like suppliers and wholesalers can also access the extranet of the company. Using the extranet, suppliers can communicate with employees about stocks or dealers can order the required quantity of goods.

ICT use in business

- **Software robots**: Chatbots are the most widely used software robots. Do you remember surfing on a random website when a pop-up comes up asking you if you need any help finding particular information? If you go ahead and reply, you communicate with a 'software robot' that helps you navigate better. Software robots are special software created to work as a virtual workforce.
- **Cloud technologies**: Cloud servers let businesses store their data on the server of another company. If a company is using cloud service, then they don't have to invest a huge amount of money in setting up their server.

ICT use in business

- **Digital communication apps**: Many businesses use mobile applications to communicate internally. There are some apps like Slack or Google Workspace that help communication while working remotely feasible.
- **Technologies to facilitate home working**: Nowadays many businesses have adopted a work-from-home policy. There are technologies such as the Microsoft Office suite where people can work simultaneously on a single project. Zoom calls have also smoothened communication for larger groups of employees.

Application of ICT in business

ICT in Healthcare

- **Quality of care:** Well-designed and reliable technology frees up the time and attention of your staff, enabling them to focus on patient care. Furthermore, a robust network allows your facility to implement powerful new tech, like the latest monitoring devices.
- **Accuracy:** Errors are inevitable when hardware and software aren't designed with the needs of end users in mind. Our technology can help ensure that your team members are more successful as they input and verify codes, leading to fewer medical errors. Reduced errors means reduced costs — and better patient outcomes.

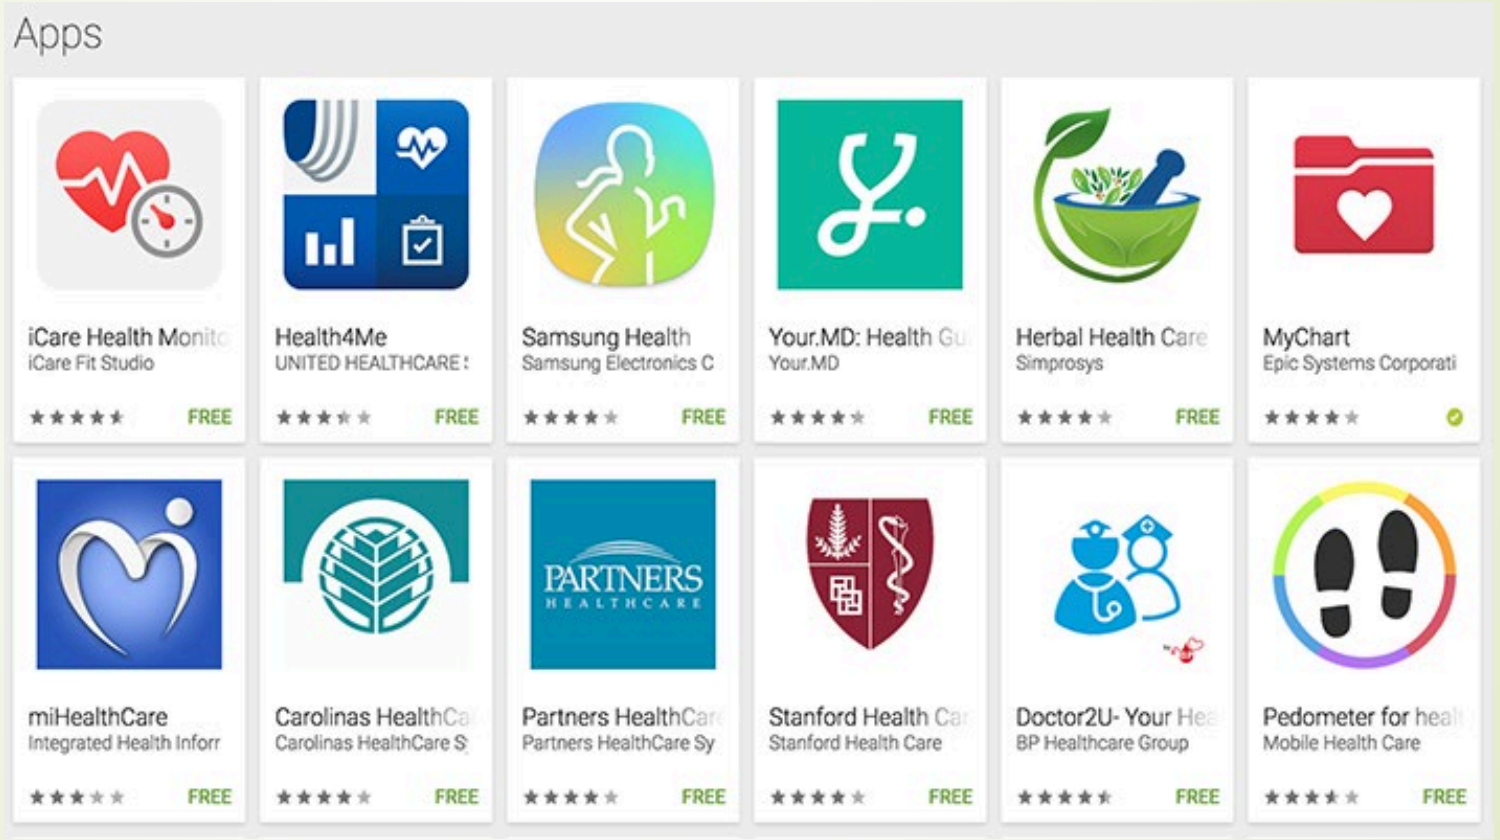

ICT in Healthcare

- **Seamless collaboration:** When your network is working as it should, your staff always have access to the information they need to provide the best possible care for patients. Teams can only operate as teams when they can effectively communicate, and information technology makes that possible.
- **Disaster recovery:** Your patient's medical records and billing information is too important to be lost due to a power outage or a failing hard drive. Worldwide Services can implement technologies that will ensure speedy recovery of your systems and your data in the event of a disaster or emergency.

ICT in Healthcare

- **Reduced costs:** The right healthcare IT provider give you competitive advantage in your marketplace and save your money as you implement new technologies. ICT can help your facility operate more efficiently in many ways, from automating repetitive tasks and managing a large staff to quickly putting the right information in front of the people who need it.
- **Security and privacy:** Network security is crucial for any healthcare provider. It's not merely a matter of meeting regulatory requirements, but of protecting your investments into equipment and ensuring the privacy of patient health care records. Data security is a vital component of your credibility and reputation.

Application of ICT in Healthcare

What is E-Governance

- Electronic governance or E-governance is application of information and communication technology (ICT) for delivering government services, exchange of information, communication transactions, integration of various stand-alone systems between government to citizen (G2C), government-to-business (G2B), government-to-government (G2G), government-to-employees (G2E) as well as back-office processes and interactions within the entire government framework.

E-Governance

- Some of the **key factors** of these two types of transformations include:
- E-Government - Transformation of Government, Modernization of processes & functions, Better delivery mechanisms, Citizens are recipients.
- E-Governance - A decisional process, Use of ICT for wider participation of citizens, Citizens are participants.

ICT in Entertainment

- **Home and leisure** - you have different machines to help you do task at home like cooking, washing, air conditions. You use microwaves to help you heat up food, and have washing machines to wash your clothing. And these machines are made by using ICT. If it weren't for ICT, we would have to make fire to cook our food.
- • **Communication** - every single day, we use phones, computers, and different sites (like face-book or twitter) to talk to out friends or family and ICT invented these methods to enable to talk to people and communicate with them, and ICT also helps us talk to friends that lives on another country.

ICT in Entertainment

- **Gaming** - Many people play a wide range of games, on computers or on play stations. ICT is the reason for this, they made different types of games for every person to play like action, adventure, construction, and simulation. We can even play games with friends online, you can communicate with them as you play with them.
- **Media streaming** –you can listen to music, look at photographs, and watch a movie. With technologies provided by ICT , you can stream, or download media that you can use for entertainment, for these entertainments, we would have to use the wireless network, or the internet to allow use to stream on any websites.

ICT in Media

- **communication is affordable:** It is no longer a costly affair to pass information. With an internet connection and a computer, anyone can pass information to the world. It does not cost a dime to post news on Facebook, Twitter, and any other social media platforms.
- **diversifies communication:** It is no longer the time when if you wanted news you had to read a newspaper, watch television or listen to the radio. Today, you can get all information on websites, social media pages, and mobile devices. This diversification has made it possible for communication to be efficient, effective and reach all four corners of the world.

ICT in Media

- **free access to information:** Mass communication will never be complete if its end product does not reach the intended users. ICT makes sure that communication achieves its intended objective of reaching the masses. Without technology, mass communication would not be able to achieve its goal. That is why technology will continue to be at the center of advancing not only the access of information but also the creation of communication messages.
