A1:

Result: Grade A (Low Attendance)

A2:

1. Else doesn't hold conditions. Else if should have been used there.

```
else (score > 70) {}
```

2. No Semi colon after Print statement.

```
System.out.println("Grade: B")
```

3. Else if cannot be used after Else Statement and it also require a condition to be specified.

```
else if {
System.out.println("Grade: C");
}
```

A3:

```
import java.util.Scanner;
public class salary {
    public static void main(String[] args) {
        Scanner sc=new Scanner(System.in);
        System.out.print("Enter your salary: ");
        int salary = sc.nextInt();
        double tax = 0;
        if (salary <= 250000 ) {
            tax = 0;
        } else if (salary >= 250000 && salary <= 500000) {
            tax = (salary - 250000) * 0.05;
        } else if (salary >= 500000 && salary <= 1000000) {
            tax = 12500 + (salary - 500000) * 0.20;
        } else {
```

```
            tax = 112500 + (salary - 1000000) * 0.30;
        }
         double totSalary=salary-tax;
         System.out.println("Total Salary: " + totSalary);
        System.out.println("Tax: " + tax);
    }
}
```
